GEPCO® BRAND

HydroBloc™ Water-Resistant Cables

with Advanced Water-Block Construction

Available in a variety of cable types for a wide array of applications, Gepco® Brand HydroBloc™ Water-Resistant Cables feature an advanced water-block construction, a sunlight- and moisture-resistant jacket and a ripcord for ease of stripping for audio/control versions.

ADVANCED WATER-BLOCK CONSTRUCTION

The advanced water-block construction of HydroBloc cables starts with a two-ply water-blocking tape for superior protection. In contrast to one-ply tape in which water-blocking polymer is attached to one side of a fiber filament tape, the two-ply tape has the water-blocking polymer sandwiched between two fiber filament tapes, which allows for increased volume of the polymer. In addition, HydroBloc cables (with the exception of coax versions) utilize water-swellable fillers for added protection. This advanced construction results in greater swell heights to better fill any voids and prevent water from migrating down the cable and disrupting any electrical characteristics should there be a cut or slit in the jacket.

- **Ideal for Indoor/Outdoor Applications**
- **For Use in Wet Locations Inside Conduit**
- **UL Rated and in Compliance with the TIA-455-82-B Water Penetration Test**
